

Standards for Mathematical Practice

From Theory to Implementation

To implement the Standards for Math Practice, it is necessary to experience the practice of mathematics. In this institute, teachers will do mathematics as mathematicians, and then reflect on their own work and their thinking processes. Teachers will then consider ways to implement similar activities in their own classrooms in order to develop students' mathematical thinking. We will consider questions such as what conditions are necessary, how can obstacles be overcome, what are realistic goals, and how to adapt the activities to fit into the curriculum?

* This institute is based on the "Developing Mathematical Practices in High School" institute developed by the Education Development Center, Inc. (mpi.edc.org)
